

## **AMENDMENT TO CLAIMS**

### **Listing of Claims:**

[The listing of claims will replace all prior versions, and listings, of claims in the application:]

1. (Currently Amended) A method for managing tasks performed on a computer capable of coupling over a network to a network-based media server, said method comprising:

receiving tasks to be performed from a single client media player program operating on the computer, the tasks pertaining to one or more different media-based actions, and the tasks involving interaction of the client media player program with the media server over the network;

activating an operation at the client media player program at the computer to respond to each of the tasks; and

coordinating performance of the activated operations at the client media player program in accordance with priority levels associated with the different media-based actions of the tasks, each of the different media-based actions having a different priority level, the priority levels for the different media-based actions being user-modifiable.

2. (Original) A method as recited in claim 1, wherein the priority levels are provided on a per-computer basis or a per-user basis.

3. (Original) A method as recited in claim 1, wherein said coordinating operates to coordinate the execution of the activated operations pertaining to a particular user of the computer based on the priority levels.

4. (Cancelled).

5. (Original) A method as recited in claim 1, wherein the different media-based actions include at least: previewing media, browsing media, purchasing media, and downloading media.

6. (Original) A method as recited in claim 5, wherein the media includes at least one of audio, video or images.

7. (Cancelled).

8. (Cancelled).

9. (Previously Presented) A method as recited in claim 1,  
wherein the media includes at least audio, and  
wherein the different media-based actions interact with the media server and include at least: previewing music, browsing music, purchasing music, and downloading music.

10. (Cancelled).

11. (Currently Amended) A computer readable medium including at least executable computer program code tangibly stored thereon for managing tasks performed on a computer capable of coupling over a network to a network-based media server, said computer readable medium comprising:

computer program code for receiving tasks to be performed from a single client media player program operating on the computer, the tasks pertain to one or more different media-based actions, and the tasks involving interaction of the client media player program with the media server over the network; and

computer program code for coordinating performance of the tasks at the client media player program in accordance with priority levels associated with the different media-based actions of the tasks, each of the different media-based actions having a different priority level, the priority levels for the different media-based actions being user-modifiable.

12. (Original) A computer readable medium as recited in claim 11, wherein the priority levels are provided on a per-computer basis or a per-user basis.

13. (Original) A computer readable medium as recited in claim 11, wherein said computer program code for coordinating operates to coordinate the performance of the tasks pertaining to a particular user of the computer based on the priority levels.

14. (Original) A computer readable medium as recited in claim 11, wherein the priority levels associated with the different media-based actions are user-modifiable.

15. (Original) A computer readable medium as recited in claim 11, wherein the different media-based actions include at least: previewing media, browsing media, purchasing media, and downloading media.

16. (Original) A computer readable medium as recited in claim 15, wherein the media includes at least one of audio, video or images.

17. (Cancelled).

18. (Cancelled).

19. (Previously Presented) A computer readable medium as recited in claim 11,  
wherein the media includes at least audio, and  
wherein the different media-based actions include at least: previewing music,  
browsing music, purchasing music, and downloading music.
20. (Cancelled).
21. (Previously Presented) A computer readable medium as recited in claim 11,  
wherein said computer program code for receiving and said computer program code for  
coordinating are part of the single client media player program.
22. (Original) A computer readable medium as recited in claim 11, wherein said  
computer program code for receiving and said computer program code for coordinating  
are part an operating system program that operates on the computer.
23. (Currently Amended) A computer for presenting media to its user, said computer  
comprising:
- a single client media application program operable to enable the user to play,  
browse, preview, purchase, download and [[or]] present media items for the benefit of  
the user;
  - a network interface that permits said single client media application program to  
interact with a media commerce server that stores or manages a plurality of media  
items that can be browsed, previewed, purchased or downloaded; and
  - a task manager that manages performance of at least browse, preview, purchase  
and download operations by assigning user-modifiable priority levels to each of the  
browse, preview, purchase and download operations, and managing performance of the

browse, preview, purchase and download operations in accordance with the assigned user-modifiable priority levels.

24. (Previously Presented) A computer as recited in claim 23, wherein each of the browse, preview, purchase and download operations are executed by different processing, and wherein said task manager causes the processing to be performed in accordance with the assigned priority levels.
